Editorial

With all the efforts of 2016, Advance in Biochemistry and Biotechnology begins its first year of publication. It is with great pleasure that I announce the first issue in Advance in Biochemistry and Biotechnology (ABIO).

Advances in Biochemistry and Biotechnology is a new online international open access journal, which covers high quality of manuscripts, which are both relevant and applicable to the broad field of applied life sciences. To stimulate the progression of life science and broad the communications among scientific researchers, the field of Biochemistry, Molecular Biology, Biotechnology and related area will be all considered in our publications.

We expect to distribute most finish and solid wellspring of data on revelations and current improvements in the method of original articles, review articles, case reports, short communication, etc. We also encourage prospective review articles, studies leading to new points or hypothesis and research reports covering negative findings.

As a new journal, I am grateful that we have motivated and passionate editorial board members who are experienced in their field. Our editors will tell you that we treat every manuscript the way in which we would want our own work to be treated. We do our best to increase efficiency, reasoned decisions and we try to save author's valuable time and effort.

To establish an identity for ABIO journal in current life sciences, we all know that the success of the organization doesn't appear without the submission of good quality of manuscripts from authors. We hope that you will share our enthusiasm and that you will submit your research to ABIO journal. In this way we are not only being single researcher in one field, but also build together the life science community, which lead us to greater future.

ABIO journal Editorial Board is working on new concepts for scientist to share results with their peers and thereby to distribute and exchange of their valuable knowledge to broad applied life science research. We expect that ABIO journal will increase their impact by your continuous support and by doing our best.
