Intussuscepted appendix imitating the caecal polyp – A description of two cases

Wiktor Krawczyk, Jakub Kroppeniewicz and Zbigniew Lorenc

Medical University of Silesia, Poland

Intussusception of appendix is a rare disease and it gives non-characteristic symptoms. It may present acute inflammation, chronic pain in the right abdomen to completely asymptomatic cases. Preoperative diagnosis is rare. The paper presents two cases of patients who were diagnosed with intussusception only after surgery. Both patients underwent a resection procedure with laparoscopic access. The most frequent symptoms, causes, diagnostics and treatment of intussusception of appendix were discussed.

Biography
