### Commentary

It is actually known through the sedimentation, that certain types of cancer (colon, breast, prostate, etc.) defeated by a miracle Amazonian plant which turned out to be 10,000 times more powerful than some drugs chemotherapy. With extracts from this powerful plant will be possible to beat cancer throughout Security with an all-natural therapy that does not cause nausea, weight loss and hair, protect the immune system and prevent fatal infections, feeling stronger and healthier throughout the course of treatment, increase your energy and improve life expectancy. During his research the Rain tree Nutrition discovered that the National Cancer Institute (NCI) in 1976 had already verified that the extracts of this plant were able to attack and destroy malignant cancer cells. This study however, had been filed as an internal report and never made public.

Despite these properties have been discovered already in 1976, he was never conducted a study on humans, so no double-blind trials and other tests to check the value of the treatment likely to be published in medical journals and so universally accepted as a therapy. In any case, graviola has been shown to destroy cancer cells in other 20 studies of laboratory. The most recent, conducted by the Catholic University of South Korea in early 2001, has revealed that two compounds extracted from the seeds of Graviola showed "selective cytotoxicity comparable to Adramycin "(a drug

commonly used in chemotherapy) for cancer cells in the colon and breast, leaving intact the healthy cells at the same time, contrary to what occurs with the chemotherapy.

In another study, published in the "Journal of Natural Products", it showed that Graviola is not only comparable with Adriamycin, but surpasses it blatantly in laboratory studies, as a compound of the plant has destroyed selectively the cancerous cells of the colon with a power 10,000 times higher than Adriamycin. Even researchers at Purdue University found that extracts of Graviola have eliminated the cancer cells in at least six types of cancer and have been especially effective against cells of prostate cancer and pancreatic cancer. According to another study, also from Purdue University, extracts of this plant could isolate and destroyed lung cancer cells. While much of the research on Graviola are focalize on its anticancer capacity, the plant is used since centuries by traditional medicine in South America to treat a surprising number of disorders including: anxiety, high blood pressure, flu, ringworm, scurvy, malaria, skin rashes, neuralgia, dysentery, arthritis and rheumatism, palpitations, nervousness, insomnia, diarrhea, fever, nausea, pimples, dyspepsia, muscle spasms, ulcers. There is no doubt that a cancer patient should have access to all the treatment options available. Graviola could provide the necessary and decisive help to defeat disease, moreover, being the absolute absence of toxicity was observed, without bear the heavy side effects caused by the various drug treatments.
